

For the past several years I have worked primarily as a technical project manager for a multi-million dollar database marketing firm, supporting a 24/7, high-performance, multi-site environment. Prior to that, I worked in the network and systems analysis, technology support, and IT consulting, aiding clients with use of specialized enterprise infrastructure and applications.

Some of those areas include systems running in a UNIX/Linux environment, large-scale SQL and Oracle databases, cross-platform wired and wireless networking on both large and small scales, and enterprise email and calendaring systems.

My interests in the field of Information Technology are varied, but I believe that they all tie together neatly with my skillset and experience. I am primarily interested in:

- * Project and Change Management
- * Information Assurance and IT Security
- * Network and Systems Administration
- * Strategic Planning and Business Process Management
- * Cross Platform Support and Integration

I like to consider myself a hard-working, creative, and talented individual with a penchant for picking up new skills and techniques quickly, as well as being able to retain and apply old skills effectively. I consider myself as a problem-solver, excellent at finding new solutions and approaches to difficult problems, skills I learned both in my work experience and in my education. Furthermore, I am keen to opportunities for change and improvement, and enjoy working with coworkers to streamline an organization or implement new ideas.

I am currently working on expanding my knowledge and skills in all of these fields and more, while retaining my edge and staying up-to-date and timely with the skillset I already possess. I am available for contact via email at alanhenry@novawerks.net.
