

For the past several years I have worked primarily as a technical project manager for a multi-million dollar database marketing firm, supporting a 24/7, high-performance, multi-site environment. Prior to that, I worked in the network and systems analysis, technology support, and IT consulting, aiding clients with use of specialized enterprise infrastructure and applications.

In addition to that work, I have taken on additional freelance writing and blogging opportunities and additionally operate a number of my own blogs on a variety of topics. Some of the areas I have covered specifically have been streaming music and music discovery services, productivity and organizational applications and Web services, social networking and micro-blogging services, Apple and Macintosh-related news, travel sites and services, video games, PC gaming peripherals, MMORPGs, and DJ and audio apps and equipment.

My goal is to continue building a reputation as a freelancer for someone who can deliver high-quality content quickly regardless of the project or customer. I am primarily interested in covering the above topics, but would also appreciate any opportunity to cover more areas, including enthusiast computer builds, new PC hardware and gaming peripherals, technology conferences and conventions, and breaking technology news.

I like to consider myself a hard-working, creative, and talented individual with a penchant for picking up new skills and techniques quickly, as well as being able to retain and apply old skills effectively. I consider myself as a problem-solver, excellent at finding new solutions and approaches to difficult problems, skills I learned both in my work experience and in my education.

I currently operate personally owned blogs on topics including my personal life, my political views, general technology, my favorite podcasts and IPTV shows, World of Warcraft and gaming, and more. I also have plans to extend my blogging projects into new areas. I am available for contact via email at alanhenry@novawerks.net.
